1. Supported operating systems

Mac OS X 10.5

Mac OS X 10.6

Mac OS X 10.7

Mac OS X 10.8

Important preparations

1) Log in to your Mac using an account with administrator privileges.

2) Before launching this application, quit all other running applications.

2. Introduction

Thank you for downloading the “ZOOM MS-50G System v2.01 Updater” application.

This document explains how to update the MS-50G firmware.

3. Checking the MS-50G firmware versions

Following the procedures on page 22 of the MS-50G operation manual, check the firmware versions of your MS-50G. If the SYSTEM version is v2.01 or higher, you do not need to use this application to update the firmware. If the system version is lower than v2.01, follow the procedures below to update the firmware.

4. Updating the firmware

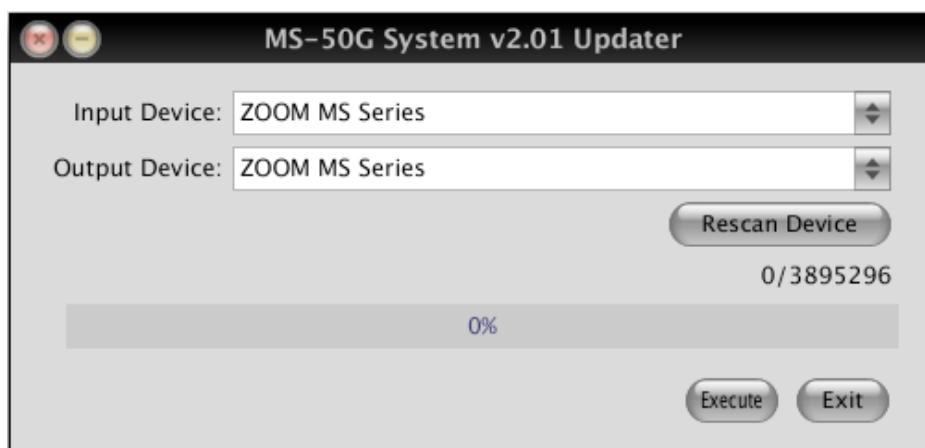

Before updating the firmware, if any MIDI or audio devices are connected by USB cable to the Mac you are using, disconnect them all. In addition, if any applications are running, quit them all.

- 4.1. When the MS-50G power is OFF, while pressing and holding both its up and down keys, connect it by USB cable to a USB port on the Mac.

This operation puts the MS-50G into a state ready to receive a firmware update, and its display shows a firmware update standby screen.

- 4.2. Double-click the “ZOOM MS-50G System v2.01 Updater.app” icon for the firmware updating application to launch it.

After launching, a window that looks like this appears.

- 4.3. Confirm that “ZOOM MS Series” appears in both the “Input Device” and “Output Device” fields. If it does not, click the field to open a list of MIDI devices and select “ZOOM MS Series.”
- 4.4. Click the **Execute** button to start the firmware update. The progress of the firmware update appears as a bar like this.

Do not disconnect the USB cable while the firmware is being updated.

4.5. When the firmware update completes, a message like this appears.

In order, click **OK** and then **Exit** to quit the firmware updater application.

When "Complete" appears on the MS-50G display, disconnect the USB cable and turn its power off.

Turn the MS-50G power ON again and confirm that the BOOT version is now v1.10 and the SYSTEM version is now v2.01.

This completes the firmware update.
